

Brown Huntsman Spider (*Heteropoda jugulans*) This Spider was observed near the sand locker on RHS Gold 5 tee-block.

Dome-web Spider (*Cyrtophora moluccensis*) This Spider is commonly observed among shrubs in garden areas.

Garden Earthworm (*Amyntus* species) Garden Earthworms, highly prized by gardeners for their beneficial effect on soils, are sometimes seen on the fairways after rain. The above specimen had evidently not encountered any early birds, but the one below had to run the ant gauntlet!

Giant Earthworm (*Heteropodrilus tryoni*) Giant Earthworms, growing up to 50cm long (this fine specimen was about 30cm) are also seen crossing fairways after rain. It is amazing that, so far, they have avoided the notice of the birds!

Golden Orb Spider (*Nephila* species) The Golden Orb Spider is commonly seen in large complex webs between shrubs and trees in garden areas, usually in Summer, when large aggregations are often observed (image below).

Morning Jewels (*Venonia micarioides*) The webs of the spiders known as Morning Jewels are often seen over shrub canopies when dew has occurred in the early morning, usually in Summer. This image was recorded on the LHS of the path from Red 9 green back to the clubhouse.

Potter Wasp (*Abispa ephippium*) This Potter Wasp was seen on the Red 1 fairway surrounds.

Sugarbag Stingless Bee (*Trigona carbonaria*) Two hives have been recently introduced to IGC via Adrian Levido, one of which is located on the RHS Gold 2 mens tee-block, under the Sirtus tree (above), with close-up of bees below.

Trunk-gallery Termite (*Nasutitermes* species) These termites construct an arboreal nest and maintain contact with the ground by external galleries running down the trunks of trees. This example is on the LHS of Gold 2 fairway, along the Brisbane River bank. Others can be seen on RHS of Red 9 fairway approaching the green.

Trunk-nesting Termite (*Microceretermes walkeri*) These termites construct an arboreal nest on the trunks of living or dead trees with galleries running down to maintain ground contact. This example is on the LHS of Gold 3 fairway, along the Brisbane River bank, where a Sacred Kingfisher has made a nest in this termite nest.

Wolf Spider (*Lycosidae* species) The Wolf Spider above was observed crossing a concrete path near the Clubhouse. The one below was killed by an unknown hornet and being taken to it's nest near the tee-block on Red 8.
