

**Asparagus Vine** (*Asparagus plumosus*) This scrambling vine is very common along the River and other untended places, with flower close-up below.

**Asthma Plant** (*Chamaesyce hirta*) This prostrate weedy herb is not suspected of causing asthma; but a hot concoction has been used in traditional herbal medicine to relieve that condition.

**Balloon Vine** (*Cardiospermum grandiflorum*) This South American vine can easily smother trees and shrubs and is very commonly seen along the river, with flower close-up below.

**Bittercress** (*Lepidium didymum*) This widespread herbaceous weed can be observed widely in shady garden areas, including the LHS of Gold 5 tee-block.

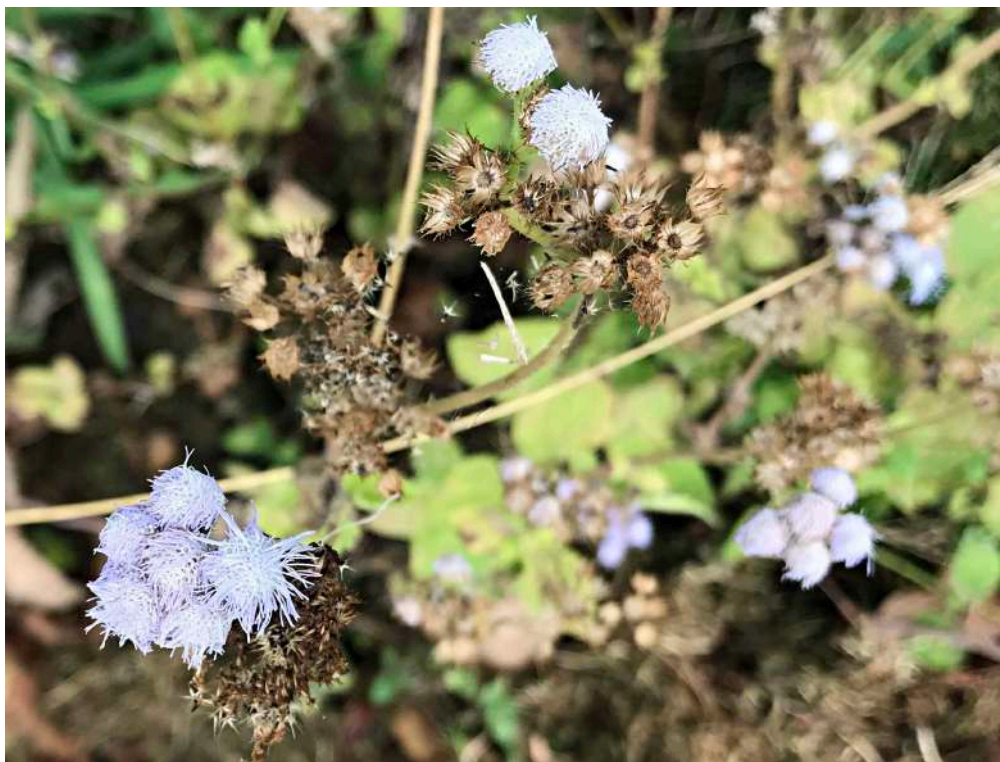

**Blackberry Nightshade (*Solanum nigrum*)** This pan-tropical herbaceous weed can be observed widely in shady garden areas including around the pathway between Red 3 and 4. The green berries seen in this photo will turn black on maturity.

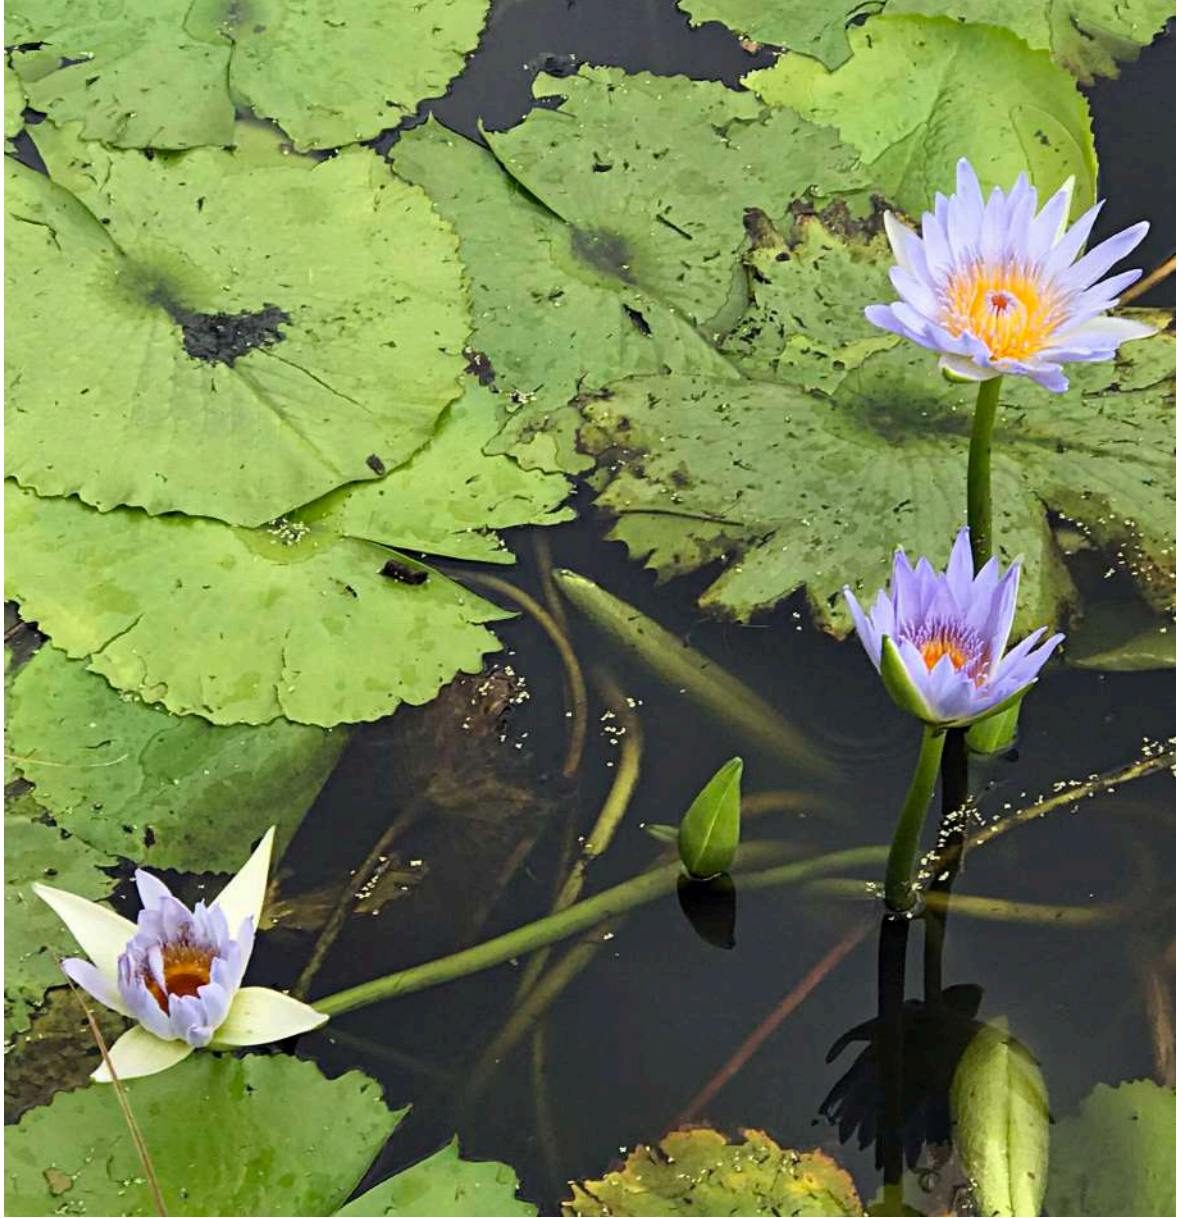

**Blue Billygoat Weed** (*Ageratum houstonianum*) This Tropical American weed can be observed commonly in garden areas, with a close-up below.

**Blue Water Lily** (*Nymphaea caerulea*) Although very attractive, this introduced African aquatic can dominate ponds, reducing the growth of native species.

**Brazilian Cherry** (*Eugenia uniflora*) This South American relative of our Lillypillies is an invader of bushland and is found in the Meiers Road Carpark. A flower close-up is provided below.

**Brazilian Nightshade** (*Solanum seaforthianum*) This South American weedy vine commonly grows over shrubs and trees along the River, producing many flowers and fruits that can be spread by local birdlife.

**Broad-leaved Pepper** (*Schinus terebinthifolius*) This South American introduced shrub is a common weed of the river banks and can be observed on the LHS of the Gold 3 men's tee-block. Again, this species produces many seeds that are spread by birds.

**Castor Oil Plant** (*Ricinus communis*) A garden escape, the Castor Oil shrubs can also be seen along the River banks, where seeds are spread by birds. See fruits below.

**Cat's Claw Creeper** (*Dolichandra unguis-cati*) This weedy vine with spectacular flowers is a serious pest of the Riverbanks, with underground tubers that make their control very difficult.

**Coastal Morning Glory (*Ipomoea cairica*)** This twining vine with conspicuous tubular purple flowers is commonly seen around the edges of landscape areas. A rare white-coloured form (below) grows along the Riverbank on Blue 3.

**Cobbler's Peg** (*Bidens pilosa*) This herbaceous weed is an annoying plant whose hooked seeds (see below) attach themselves to anyone or anything that brushes past them!

**Common Sida** (*Sida rhombifolia*) This American shrubby weed is widespread and can be observed near the pond on the LHS of the Red 9 tee-blocks.

**Coral Berry** (*Rivina humilis*) This herbaceous weed is a common herbaceous weed in shaded areas.

**Crowsfoot Grass (*Eleusine indica*)** This introduced African grass weed is low-growing and occasional in garden areas.

**Curry Leaves** (*Murraya koenigii*) This shrub is a recent volunteer along the Riverbank on Red 4, where it's has recently been dropped by a bird. This is an interesting example of the ongoing arrival of weed seeds on our site.
